### ADDENDUM NUMBER TWO

B63-09

### SCHOOL STREET RETAINING WALL PROJECT

TO ALL FIRMS OF RECORD: This addendum forms a part of and modifies the bidding and contract documents and technical specifications for the project named above. The following changes, additions and clarifications are made to the original Contract Documents:

1. **School Street Retaining Wall.** At the mandatory pre-bid meeting conducted on June 30, 2009 for B63-09, School Street Retaining Wall Project, the question was raised by contractors as to whether the wall could be constructed on a slope instead of being constructed level and the top field-cut to match the grade of the sidewalk. The City's engineer, Vanasse Hangen Brustlin, Inc. (VHB) stated that per previous conversations with Redi-Rock, the slope of the School Street wall would be too steep constructed parallel to the top of wall grade.

Subsequently, the Redi-Rock fabricator contacted VHB and stated they had just completed a wall designed on a steeper slope and asked of the School Street wall could be designed on a constant slope from beginning to end of wall with the minimum reveal and a varying maximum reveal between the sidewalk and top of wall. Redi-Rock provided a design plan sheet and photos of the constructed wall for reference.

This alternative wall configuration is acceptable, subject to the City's review of the design and details provided by the fabricator's professional structural engineer.

PLEASE BE ADVISED THAT THE CONTRACTOR MUST ACKNOWLEDGE RECEIPT OF ADDENDUM ONE AND TWO ON THE BID SHEET SIGNATURE PAGE.
