ADDENDUM NUMBER THREE

B63-09

SCHOOL STREET RETAINING WALL PROJECT

TO ALL FIRMS OF RECORD: This addendum forms a part of and modifies the bidding and contract documents and technical specifications for the project named above. The following changes, additions and clarifications are made to the original Contract Documents:

1. **Question:** "I have been talking to a sheeting/shoring person. He is trying to figure what the cofferdam is all about. There are no elevations for depth. The details show 1:5:1 slope for excavation. There is also a sewer line involved. Please advise on how to handle this."

Answer: The "cofferdam" which is show perpendicular to the west end of the proposed retaining wall is called out to draw the contractor's attention to the fact that excavation support in accordance with Standard Specification Item 503.2 must be provided to retain the gardens, sidewalk and the street in front of 87 School Street in order to construct the end of the wall.

The depth is that which the contractor deems necessary to construct the wall designed by the fabricator. Depending on the method and geometry of excavation support chosen, the extents may vary from that shown on the plans and the sewer line may or may not be involved.

PLEASE BE ADVISED THAT THE CONTRACTOR MUST ACKNOWLEDGE RECEIPT OF ADDENDUM ONE, TWO AND THREE ON THE BID SHEET SIGNATURE PAGE.
